RE: RECOMENDATION

[REDACTED] is a down hole chemical injection company. Since 2006 we have been installing and commissioning capillary injection systems, many of which utilize solar powered chemical pumps. We have tested and deployed many of the solar pumps available on the market in the last two (2) years; in 2008 we made an operational decision to standardize on the Sirius brand for our systems. We found Sirius to be a technically superior product, packaged with high quality workmanship and priced to compete with other offerings on the market. Since standardizing on the Sirius pump we have decreased the number of warranty call backs attributed to pump failures in the field, reducing our operating costs and increasing our clients satisfaction. Our field operations staff find the pump easy to install, commission and maintain.

I would recommend the Sirius solar pump package to any of my clients and consider it be the best value on the market.

[REDACTED] C.E.T.
President
