

ATLAS INJECTION SYSTEM

The **Sirius Atlas** pump is designed to handle highly corrosive chemicals that are difficult to pump using conventional alloys.

With no flow-wetted metal components, the **Atlas** pump is an excellent alternative for treating applications that require corrosive, reactive, or off-gassing chemicals.

Features:

- Rated for up to 150 PSI and 2,544 G/Day
- AC or DC motors
- GP or hazardous-rated environments
- Single button rate change
- Extreme turndown ratios with no mechanical adjustments!
- Available in a variety of configurations to suit any application.

Full integration with the **Fusion2 Controller** provides the same **advanced automation capabilities** that come with every Sirius product:

- Variable-speed control
- Closed-loop feedback control
- Remote connectivity
