

DIGITALLY CONTROL ALL YOUR CHEMICAL PUMPS

ALL MAKES AND MODELS

Overwhelmed by the thought of digitizing your fields?
IT'S NOT AS DIFFICULT AS IT SEEMS!

MANAGING BY EXCEPTION

- ✓ Detect issues immediately
- ✓ Dispatch crews only to sites requiring attention
- ✓ Plan service routes and optimize chemical delivery
- ✓ Spend less time on the road

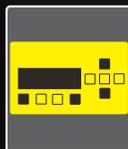

STANDARDIZE

on smart, reliable low-maintenance pumps.

MONITOR

by easily connecting to existing SCADA or Sirius' simple remote access platform.

RETROFIT

legacy controllers with Sirius' universal, intelligent pump controls.

REDUCE MANPOWER AND INCREASE PRODUCTION

STEP 1

RETROFIT to SMART CONTROLS

Why add smart controls to legacy pumps?

- **Accuracy** maintained autonomously, compensating for pressure, temperature, voltage or mechanical variations.
- **Communication** ready through SCADA, cellular, or both!
- **Automation** to convert on/off timer control to variable speed control. Easily add tank level monitoring, flow measurement, multi-point injection or feedback control.

STEP 2

REMOTE MONITORING

Monitor system performance and chemical tank levels with ease. Where networks are not available, many customers install the InSight Connect cellular system for two-way control, web based monitoring, dashboards and alarms.

No SCADA? No problem!

Digital Management no longer requires complex enterprise systems and specialized personnel.

STEP 3

STANDARDIZE on SMART PUMPS

Legacy Pump designs have been fundamentally unchanged for decades. Manually adjusted stroke length, plunger packing and regular calibration requires frequent site visits and maintenance.

What's new? Smart Pumps are 100% digitally controlled, with brushless motors, variable speed control, and modern seal designs for years of trouble free operation.

Legacy pumps are not adapted for automated, unattended operation.
