

# PACKAGED SYSTEMS

Application Sheet #1

## REAL TIME BENEFIT

Fast Set Up, Improved  
Safety, Quality and  
Reduced Chemical  
Consumption

### SITUATION

- Customer in south east Saskatchewan was purchasing components of a chemical injection system (site glass, barrel stand, pump, PRV, tubing, wiring, etc.) and assembling themselves.
- On site costs were high. Missing components drove costs up further because of the distance to get parts.

### SOLUTION

- Customer purchased Sirius' 50 Gallon Gemini chemical injection package, complete with CSA approvals, test and QC documentation, and an electrical plug eliminating the need for an on-site electrician.

### RESULTS

- Although the up-front equipment cost for the Sirius solution was slightly higher; the total cost of each system was similar when field labour and on site costs were included.
- The Sirius solution was a more complete system with many upgrades for the same price. More control on injection resulted in less chemical consumed.
- The Sirius system was set up and installed in less than 25 minutes compared to typical install time of over three hours.
- Improved quality as the system is assembled and tested in a controlled environment with detailed quality checks.
- Improved safety including CSA approvals on the complete package
