

MULTI-POINT

Application Sheet #16

CUSTOMER VALUE

Saved capital cost,
maintenance costs,
and manpower.

SITUATION

- Customer in Northern Alberta drilling oil and gas wells was using pneumatic pumps to inject chemical.
- A single pump would typically be used to inject corrosion inhibitor at each individual injection point.
- Costs of the chemical program was high due to
 - The high cost of chemical,
 - Inaccurate rates from the pneumatic pumps resulting in over-injection,
 - The high costs of manpower due to maintenance and time wasted on adjusting rates.
- Customer was preparing to drill a three-well pad with a fourth gas well.

SOLUTION

- After consulting with the client, Sirius offered a multi-point 300 Gallon Stealth system to cover all injection points.

RESULTS

- The client saved thousands of dollars in overall cost per injection point.
- Overall footprint on site was drastically reduced.
- CSA Classified system
- One pump and controller covered all injection points eliminating three pumps and providing a single location for the operator to adjust rates and check equipment.
