

# Huge Time Savings with IIOT Connect Retrofit

Application Sheet #59

## REAL TIME BENEFIT

- 84% reduction in travel!
- No more waiting for site permits, to make chemical rate changes.

### SITUATION

- A chemical vendor located in the Eagle Ford Basin operates a large, high traffic water treatment facility; gaining access to the facility requires immense paperwork and can take several days to be approved.
- Regular site visits were mandatory three times a week to make rate changes, resulting in considerable driving hours due to the facility's remote location.

### SOLUTION

- The chemical vendor upgraded the pre-existing high-volume chemical injection system with Insight Connect IIOT technology.

### RESULTS

- Insight Connect allowed the Operator to remotely adjust chemical rates without being on location.
- Site visits were reduced from three trips per week to just two per month. Total savings in man time were 180 hours monthly, in addition to reduced wear and tear on vehicles, reduced carbon footprint, and reduced risk of vehicular accidents.
- Paperwork bureaucracy and resulting man hours were significantly reduced.
