

# Titan: Big Capability, Small Footprint

Application Sheet #70

## SITUATION

- A major Canadian natural gas producer needed a site-wide chemical injection system for multiple injection points without equipment sprawl, excessive maintenance, or complex installation due to tight site layout.
- Remote location made on site construction expensive.
- The operator wanted a streamlined, reliable system that reduced installation complexity and ensured consistent chemical delivery.

## SOLUTION

- Sirius Controls supplied the Titan Multisystem Skid, a centralized platform serving all injection points from one integrated skid.
- The skid is equipped with Insight Connect for remote monitoring.
- All injection lines and electrical connections are centralized at the skid edge, providing communication, power, and remote ESD shutdown connections through a single junction box.
- The skid includes storage, metering, and multipoint distribution on a single pre-assembled,

## CUSTOMER VALUE

50+ hrs saved,  
simplified install with a  
compact and  
centralized system

factory-tested, pile-mounted platform with top-fill capability and large drip trays.

## RESULTS

- Compact, clutter-free solution vs. multiple standalone units.
- 50–65 man-hours saved by eliminating field fabrication and commissioning.
- Simplified maintenance, consistent product, reliable delivery and full remote visibility.
